VISION BUILDER COMPUTERISED VISION THERAPY

At STRACHAN EYECARE we are now pleased to be able to offer the 'VISION BUILDER' computerised Vision Therapy program.

VISION BUILDER is a home Vision Therapy program designed to treat both binocular vision disorders such as convergence problems (i.e. eye-teaming problems), accommodation problems (i.e. non-refractive focusing difficulties), suppression (i.e. "lazy eye") and eye-tracking difficulties, as well as visual perceptual or visual information processing difficulties that can impact on a student's learning by limiting their ability to understand and remember what they see.

The VISION BUILDER is highly motivating, especially for children, as the computerised activities are presented in a "game" format.

VISION BUILDER is designed to be used at home on a regular daily basis, for about 20 minutes per day, 5 days a week, and typically takes between 3 and 6 months to complete.

The VISION BUILDER program is suitable for children aged 5 years + through to adults.

We are happy to provide a no obligation demonstration of the VISION BUILDER in-office at either of our practices.

The cost of the VISION BUILDER program is \$205 which includes the in-office delivery session with your optometrist who will explain the appropriate starting level activities for your student.

As you work through the VISION BUILDER program at home, we recommend regular in-office reviews, usually every 4 to 6 weeks. There is an additional \$40 program fee to be paid at each review session.
